

P(DOOM) / WHAT WAS ACTUALLY STATED

Four risk estimates, four different questions

Historical, subjective estimates • Different outcomes, horizons and policy assumptions • Not a common forecast

Portraits label the stated ranges; their midpoints are not additional estimates. Tegmark’s arrow marks a lower bound, not a 90–100% confidence interval. Thomas calls his number approximate. No average or correlation is calculated.

38 people remain unscored. Bengio declined a new number; Ball’s off-the-cuff figure is excluded.
Unknown is not zero. Policy positions and probability statements were made at different times.
